

Huntington Intermediate Government Income Fund

Morningstar Category:
Intermediate Government

Huntington Intermediate Government Income Fund is designed to offer investors a portfolio of U.S. government obligations and mortgage-related securities, with an average weighted maturity between 3 and ten years, to provide a high level of current income. The manager focuses on securities that offer the highest level of income and a wide range of intermediate maturities in order to attempt to reduce volatility during periods of interest rate fluctuations. When selecting holdings for the Fund, the manager considers various economic factors, Federal Reserve policies, interest rate trends and spreads between different types of fixed income securities.

Fund Manager: **Bill Doughty, Senior Vice President & Senior Portfolio Manager** | Over 35 years experience | MBA, University of Dayton

Performance Update	Average annual total return (%) as of 03/31/2012

This information must be preceded or accompanied by a current prospectus or summary prospectus. Please read the prospectus or summary prospectus information carefully before investing or sending money.

Bond prices are sensitive to changes in interest rates and a rise in interest rates can cause a decline in their prices.

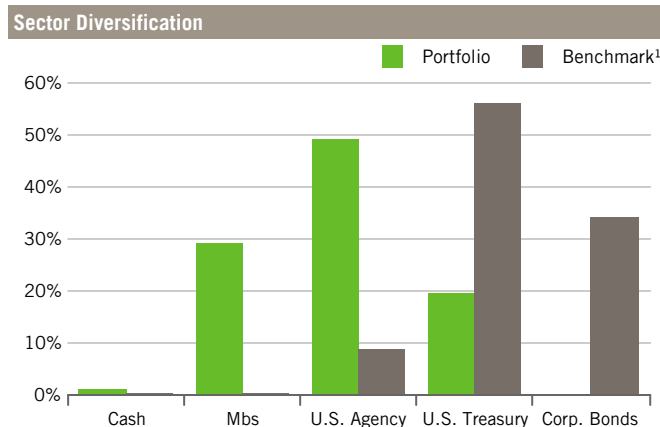

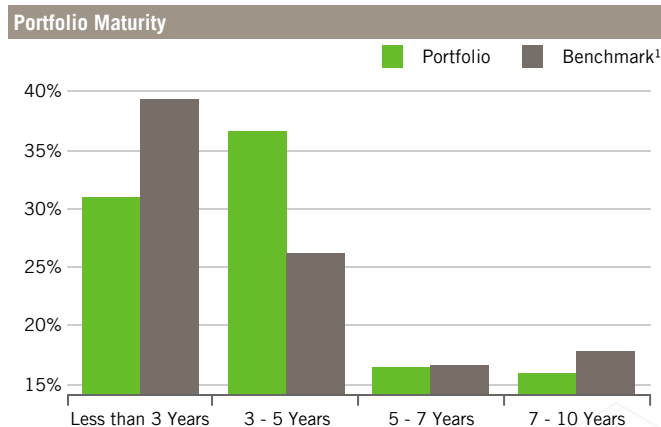

Credit ratings pertain only to the securities in the portfolio and do not protect fund shares against market risk.

Duration is a measure of a security's price sensitivity to changes in interest rates. Securities with longer durations are more sensitive to changes in interest rates than securities of shorter durations.

Weighted Average Maturity is the average time to maturity of debt securities held in the fund.

¹ The Barclays Capital Intermediate Government Credit Index is an unmanaged index and is a market value weighted performance benchmark for government and corporate fixed-rate debt issues with maturities between one and 10 years. Investments cannot be made in an index.

² The holding percentages are based on net assets at the close of business on 03/31/2012 and may not necessarily reflect adjustments that are routinely made when presenting net assets for formal financial statement purposes.

³ Credit Quality- Bond ratings apply to underlying holdings of the Fund and not the Fund itself. Ratings are based on the middle rating of three rating agencies: Moody, S&P or Fitch, as applicable. When a rating from only two agencies is available, the lower ("more conservative") rating is used. Moody's assigns bond credit ratings ranging from the highest to the lowest of Aaa, Aa, A, Baa, Ba, B, Caa, Ca, C, with WR and NR as withdrawn and not rated. Standard & Poor's and Fitch assign bond credit ratings from the highest to the lowest of AAA, AA, A, BBB, BB, B, CCC, CC, C, D. Credit ratings are based largely on the rating agency's investment analysis at the time of rating and the rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition.

Total return represents the value of an investment after reinvesting all income and capital gains. Total returns for less than one year are cumulative. Returns shown are pre-tax. To receive after tax performance, please call 800-253-0412. Diversification does not assure a profit nor protect against loss in a declining market.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations.

The 30-day SEC yield is calculated by dividing the net investment income per share for the 30 days ended on the date of calculation by the maximum offering price per share on that date. The figure is compounded and annualized.
