“Commodities Back as Gurus Eschew Financial Assets”

Pete Sorrentino shares his views on the commodities markets and his investment strategy when managing his commodity fund.

The Fund is subject to the risks associated with its investments in emerging market securities, which tend to be more volatile and less liquid than securities traded in developed countries.

Investments in commodities may be affected by overall market movements, changes in interest rates, and other factors such as weather, disease, embargoes and international economic and political developments. Commodities are assets that have tangible properties, such as oil, metals, and agricultural products. These instruments may subject the Fund to greater volatility than investments in traditional securities.

Investments in international markets present special risks including currency fluctuation, the potential for diplomatic and political instability, regulatory and liquidity risks, foreign taxation and differences in auditing and other financial standards. Risks of foreign investing are generally intensified for investments in emerging markets.

Mutual funds are subject to risks and fluctuate in value.

Small company stocks may be less liquid and subject to greater price volatility than large capitalization stocks.

International investing involves special risks including currency risk, increased volatility of foreign securities, political risks, and differences in auditing and other financial standards.

The S&P 500 Index is an unmanaged index generally representing the performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Investments cannot be made in an index.

The value of some mortgage-backed securities may be particularly sensitive to changes in prevailing interest rates, and although the securities are generally supported by some form of government or private insurance, there is no assurance that private guarantors or insurers will meet their obligations.

Investments in real estate investment trusts (“REITs”) involve special risks associated with an investment in real estate, such as limited liquidity and interest rate risks.

The funds are distributed by Unified Financial Securities, Inc. (Member FINRA) a wholly owned subsidiary of Huntington Bancshares, Inc. and an affiliate of Huntington Asset Advisors, Inc. the advisor to the Huntington Funds.
